

Water Solutions and Infrastructure

Sourcing

- Identification and acquisition of source water
- Regulatory and permitting
- Water quality evaluation
- Monitoring of water levels and sustainable production

Containment

- High volume above ground storage pits
- Frac and specialty tanks

Gathering & Disposal

- Flowback disposal
- Produced water disposal
- Produced water gathering pipelines

Treatment

- Production chemicals
- Completion chemicals
- Specialty chemicals
- Capillary injection systems

Gravity offers the complete package in water solutions, when and where you need them. We offer fluid solutions for every stage, from drilling to completion, to production. Our services include water sourcing and transfer through temporary hose or permanent pipeline, storage, removal and disposal, and treatment for recycle and reuse. We have our own water transfer stations and salt water disposal wells located throughout the Permian Basin.

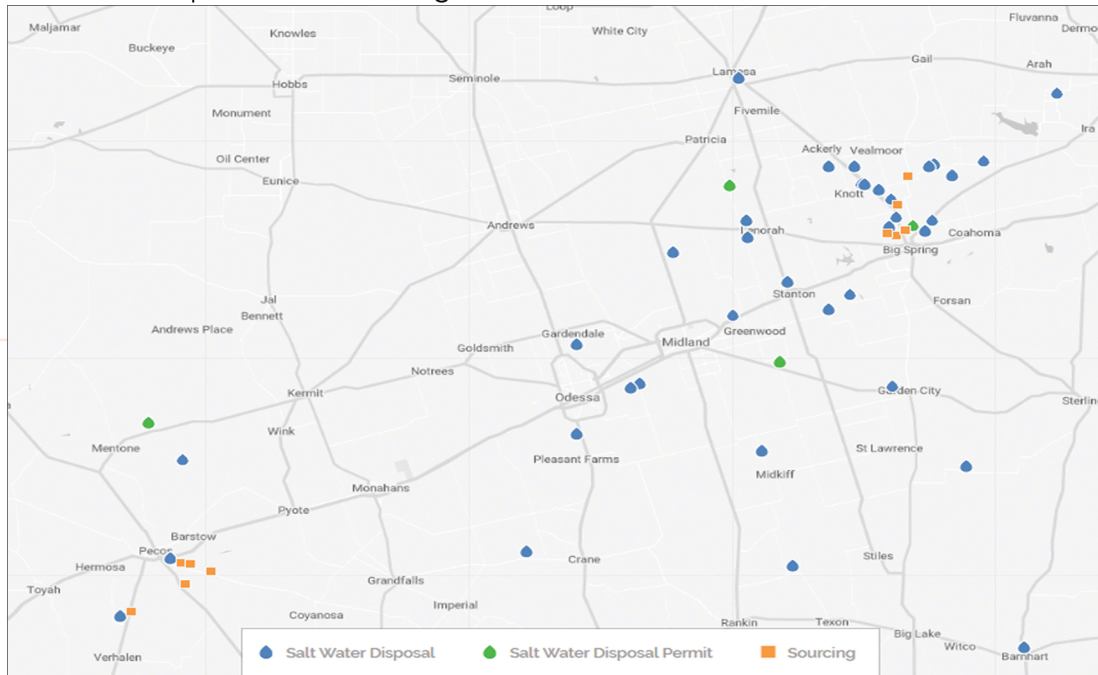

Gravity also offers completion, production and specialty chemicals. Chemical programs are designed for the specific application. We also offer capillary injection strings to target specific problematic locations.

We approach water management with an infrastructure mindset, leveraging our expertise to develop comprehensive water sourcing, takeaway, disposal and reuse solutions for operators across the Permian Basin and Bakken.

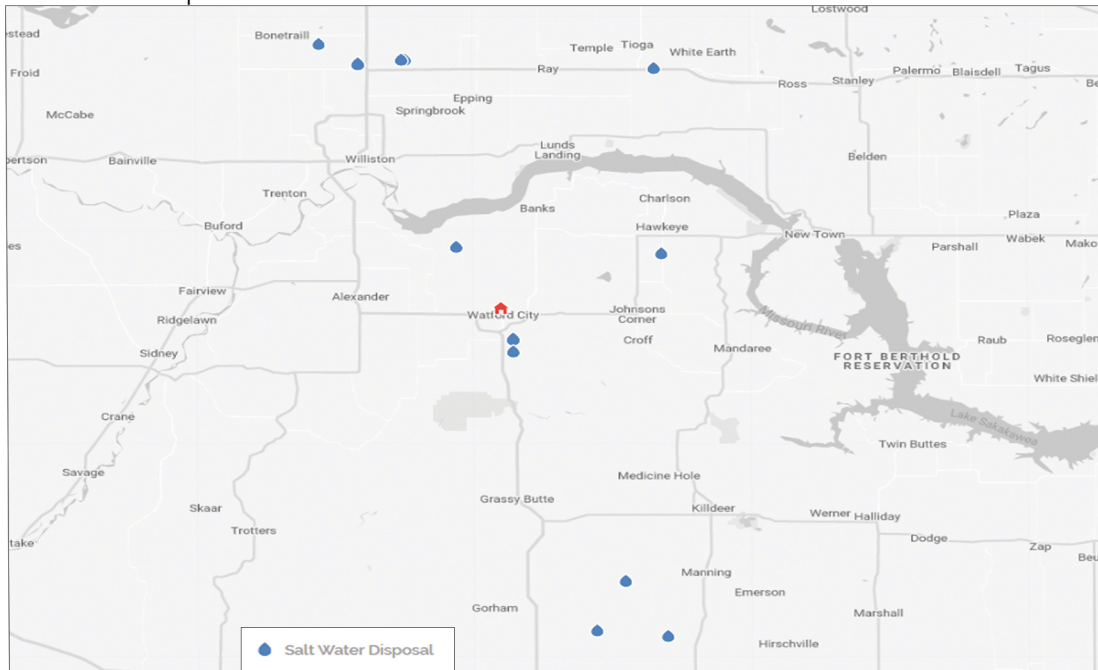

Water Sourcing, Disposal & Infrastructure

Permian Basin Disposal and Sourcing

Williston Basin Disposal
